

# Super-Car

According to the game's rule, we have compiled the competition software. We use C++ Language and Visual C++ for the development tool.

The main function includes:

- 1.It can define map and correlation parameter .
- 2.It can compute the ways and the oil consumption.
- 3.It can instruct the route of my car and define the length of stride.
- 4.It can renew the left goods quantity at each spot and we takes in this step immediately.
- 5.It can compute how much goods my car needs to take.
- 6.It can save the map information and correlation computation information.

In brief, this procedure can adapt the competition rules very well, have the very good instruction function to the competition. We believed we must win,my car is best.
