

## 1. Introduction

Day by day amount of mobile users have been increasing more than personal or other computer based application users. Because mobile is easy-to-use and also latest iPhone, Android mobile phones have a touchscreen, GPS, sensor and more features. Therefore we decide to make a web based Android application “Travel Journal” system. Also this system working with Google API, Twitter and Facebook.

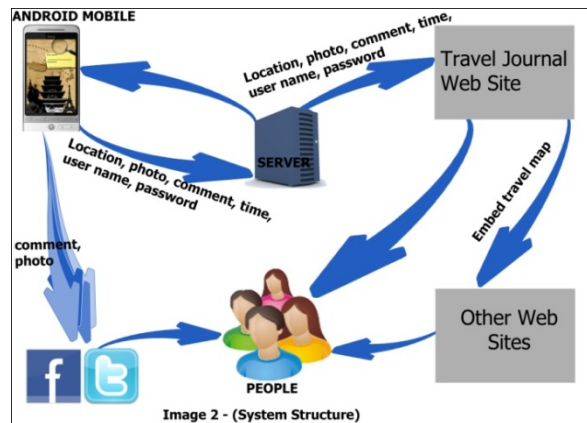

## 2. System descriptions

The visitors can register through our web site or android application. Travel Journal web site allows you to document vacation experiences and share them with your friends and family.

Travel Journal web site also allows friends and family to easily see your traveling routes, GPS waypoints for visited locations, total travelling time, total kilometers, avatar photos, comments. Therefore Travel Journal Android application sends status information to your twitter and facebook. But you must accept your friends or family members accept first. Also you will control your travel map account fully.

Impress everybody with real time updates from the visited destination map and let people see proof of your latest adventures, as your journey unfolds. You can your travel map embed to other web sites.

## 3. Technologies and platforms

Java, JSP (Java Server Pages), Spring, Hibernate, Android mobile.

## 4. Conclusion

This Travel Journal system is an improved version of tourist's trip diary and to make enjoy tourist himself and tourist's family or friends.
