

1. Introduction

In contemporary times, there is a concerning trend where individuals are experiencing a decline in their proficiency in native writing skills. This phenomenon can be attributed to the excessive utilization of social networking platforms, which is having a detrimental impact on their respective cultures. This issue is particularly pronounced in the context of Mongolia. In the year 2025, the government of Mongolia has taken the decisive step of transitioning from the Latin and Cyrillic scripts to the native Mongolian script. Concurrently, there exists a noteworthy proposal to develop an application aimed at expediting the learning process of this newly restored script. This application is envisioned to serve as an effective tool to facilitate the acquisition of the Mongolian native script in a more efficient manner.

Furthermore, this innovative learning application possesses the potential for broader applicability beyond Mongolia's borders. By addressing mutual script-related challenges faced by other countries, it can be tailored and adapted to cater to the needs of nations grappling with analogous linguistic and cultural preservation concerns. This, in turn, has the capacity to foster collaborative solutions and contribute to the sustained safeguarding of diverse cultural identities.

2. System Guide

Within the primary framework, the system will function in the capacity of utilizing your mobile device as an electronic notepad. Its primary function will encompass the monitoring of your writing proficiency, subsequently tailoring exercises commensurate with your demonstrated skill level.

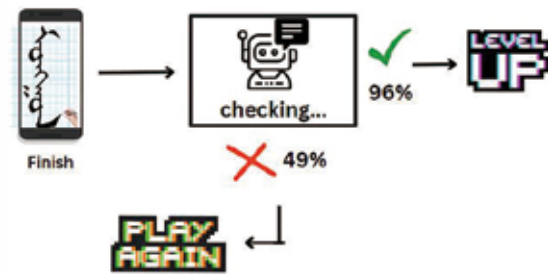

3. Potential

This system possesses the capability to be seamlessly configured to accommodate various specialized languages, such as Arabic, Japanese, Korean, and others. Its principal emphasis lies in augmenting your grammatical acumen within the selected language context.

4. System Working Process

In the initial scenario, the mobile device assumes the role of a writing platform, wherein it assesses your writing proficiency and subsequently assigns skill-oriented points based on your performance.

5. Implementation Method

This program aims to provide valuable assistance to individuals who possess a genuine willingness to engage in the acquisition of knowledge. It is particularly tailored to those who harbor an interest in mastering the Mongolian native script or any other languages, with a predominant emphasis on enhancing their proficiency in writing and grammar.

Furthermore, this initiative is poised to contribute to a reduction in paper consumption, as participants will have the opportunity to utilize their respective digital devices within the framework of the program. This digital transition aligns with environmentally conscious practices, thus underscoring its ecologically beneficial aspect.

6. Conclusion

The elevation of Mongolia's native writing skills is pivotal for the nation's continued progress and influence on the global stage. By investing in educational reforms, cultivating a culture of reading, and leveraging digital platforms, a future wherein Mongolian writers contribute significantly to literary discourse and knowledge dissemination can be envisaged.
